

PANA SPORT™

DID YOU KNOW?

- 55% of all adults experienced pain in the last 3 months. 3M adults suffer from daily pain.
- 30-50% of people struggling with chronic pain also develop a mood disorder such as depression or anxiety.
- Chronic pain costs around \$600 billion a year in medical treatments and loss of productivity.
- Consumers spend as much as \$635B each year on direct and indirect costs associated with chronic pain.

Play Your Best. Feel Your Best.

Our PANA Sport™ products are designed with a focus on helping people stay active and healthy so they can enjoy their best life. We provide a variety of strengths and applications to help maintain the most consistent relief for individual needs on and off the field, the golf course, mountain or wherever life may take you! As a company, we understand there are many different sources of aches, pains, stresses or anxieties in life, but that shouldn't deter your play.

Any athlete can attest that nerves, stiff joints, a wandering mind, and/or a poor night's sleep can have a serious impact on their performance. Did you know that CBD may help with all of those? Research has found that CBD may help reduce inflammation in joints and, as a result, help with fluid movement and ease anxiety. CBD's potential ability to calm, and relax the muscles may also promote a more restful sleep. A lack of stress and anxiety, along with a better night's sleep may help you focus on the enjoyment, the game and your performance.

CBD KINESIOLOGY TAPE
8 ft. Roll with 400 mg Total CBD
Non-Detectable THC

Panacea
Life Sciences

panacealife.com

Our CBD-Infused Kinesiology Tape performs much like our CBD patches but may provide even more support to a damaged or a healing muscle, joint, tendon or ligament group, without restricting motion. Infused with CBD, this K-tape may help to provide pain relief and support while preventing over-extension or extended stress. By utilizing the K-tape application, we can provide continual delivery of CBD with

Non - Detectable THC. The use of K-tape in this way would also keep the analgesic from getting rubbed or wiped off the skin. K-tape is designed to reduce pressure and inflammation which is blocking lymphatic fluid from transporting healthy blood flow to the tissue surrounding the damaged area. Research has shown effectiveness with post-surgical recovery, knee conditions, and relief for lower back pain, specifically with pregnant women.
